

Dr. Youssef Obeid

Dr. Obeid is a Board-Certified Prosthodontist, practicing in Chevy Chase, MD. After graduating from dental school in 1993, he spent the next years completing an Advanced Education residency in General Dentistry at the University of Maryland School of Dentistry. He continued his training at UMSOD with a Prosthodontic residency and an Advanced Surgical Implant fellowship at NYU. Dr. Obeid established Obeid Dental as a unique clinical setting where patients can receive world-class dentistry in a refined, boutique environment, 'One Patient at a Time'. In addition to over 20 years of experience, Dr. Obeid is credentialed as a Diplomate of the American College of Prosthodontics and served as President of the ACP Maryland chapter. He has lectured nationally and internationally on the latest advances in implants, prosthodontics, and digital workflow for dental practices. He has been a Clinical Assistant Professor at the University of Maryland School of Dentistry since 2001.

Surgical Principles in Implant Dentistry

Course Outline

Will computer guided implant surgery replace the conventional approach?

Will we still need to know everything about surgical principals?

The answer is an emphatic YES.

This lecture will cover the most likely implant surgery scenarios and will help guide you to make the right choice from different surgical situations and requirements

Learning Objectives

1. Proper diagnosis prior to surgical intervention
2. Understand the principles of wound healing
3. Understand the complications that can occur from poor surgical techniques
4. Understand the different dental implant brands and products used for immediate implant placement versus a conventional delayed placement
5. Clinical overview of multiple cases

In Conclusion

At the conclusion of the lecture attendees should be able to:

1. Perform better surgeries with fewer complications
2. Understand the principal of immediate implant placement
3. Devise and implement strict protocols for implant surgeries
4. Know when to refer to a specialist
5. Know when to do guided surgery and when to use a conventional approach
